TURBO TURF HS-300-E8 HYDROSEEDER

- ✓ Seed 4,000 sq. ft. per load
- ✓ Mix in minutes, spray a load in 20 minutes
- ✓ Simple operation, learn to run in minutes
- ✓ Full pressure control for great trimming.
- ✓ Reliable Honda engine
- ✓ Clean up in minutes at the end of the day.
- ✓ Few moving parts and low maintenance.

The HS-300-E8 is a great value in a great working but affordable 300 gallon hydroseeder. It has an 8 H.P. Honda engine coupled to a 3" x 3" pump. It will mix a thick slurry and like all Turbo Turf units has great control making precise trimming easier than with any competitive unit. The oval tank promotes fast mixing. The large 16" tank opening makes loading easy. This is a high performance hydroseeder that will mix a great slurry in minutes and produce a sod quality lawn in a short time.

The HS-300-E8 has a powerful jet agitation. it uses two 2" jets mounted parallel to the sides of the tank with a 333 GPM flow shooting out those jets which creates a strong rolling action that will mix a full load of materials in less than a minute. All passages are large and have few bends which almost totally eliminates the potential for clogs. The pump is a 36 PSI, 333 GPM pump that works great for hydro seeding. The pump is directly coupled to the engine. Excluding the engine, the only moving parts on the unit are the impeller in the pump and ball valves. The two large 2" mixing jets have over 6 times the mixing power of some competitive units. Unlike some competitive units pressure going to the gun can be regulated. This added control allows easy and precise trimming when seeding close to houses, walks and mulch beds. Turbo Turf systems outperform others on the market and are the best system you can buy.

Seeding open areas is fast. Our newest units are capable of seeding two more loads a day compared to our older models and competitive units. Easier operation, better trimming and faster seeding of open areas put Turbo Turf's level of performance head and shoulders above the competition. Operating a Turbo Turf is a one man operation and so easy that a new operator can be seeding like a pro in a very short time.

The differences between the HS-300-EH and the HS-300-E8 is that the HS-300-E8 comes with an oval tank where the EH has a custom molded tank that has a molded in bale tray to help speed loading minimize material spilling.

All units have front fork slots for easy loading and unloading from a trailer or truck. All units come ready to operate with 100' of 1 1/4" I.D. hose mounted on hose holders on the side of the tank and with three nozzles, (standard hydroseeding, trim and distance).

The HS-300-E8 is ideal for a landscaper doing residential and commercial seeding with average jobs of 3,000 to 20,000 square feet. It is capable of handling much larger jobs, When doing larger jobs a seeding rate of up to 1.5 acres per day is possible with a good water source. Material is applied at approximately 30 G.P.M. Time to spray a complete tank is 10 – 15 minutes. Mixing time is 1-20 minutes depending on material.

It is also popular for golf courses with remodeling projects, pipeline companies, schools, construction companies, parks departments and anyone with areas to seed.

Specifications

Tank Capacity	300 Gallons
Engine	8 H.P. Honda recoil start
Pump	3"x 3" centrifugal with 333 GPM and 36 P.S.I
Skid Size	45" x 94"
Overall size	62" x 93" x 52"
Coverage (sq. ft)	4,000 sq. ft.
Empty Weight	615 pounds
Loaded Weight	3000 pounds
Standard Hose	100 feet
Mulch that can be used	100% paper and pourable mulches
